12.61 x 4.88 x 3.62 m

*'Our stainless steel sport and play equipment is highly durable, and therefore cheaper in the long term than equipment made from plastic or steel. That is our promise to you.'*

### **Building the future**

Ijslander has been building the future since 1996. We teach children and young people to discover more about themselves and the world around them. We show adults that playtime can still be fun, and we challenge the elderly to remain fit and active. We do this with our durable, low-maintenance and 100% recyclable sport and play equipment. We're therefore working for the generations of today as well as those of tomorrow.

### **Long term vision**

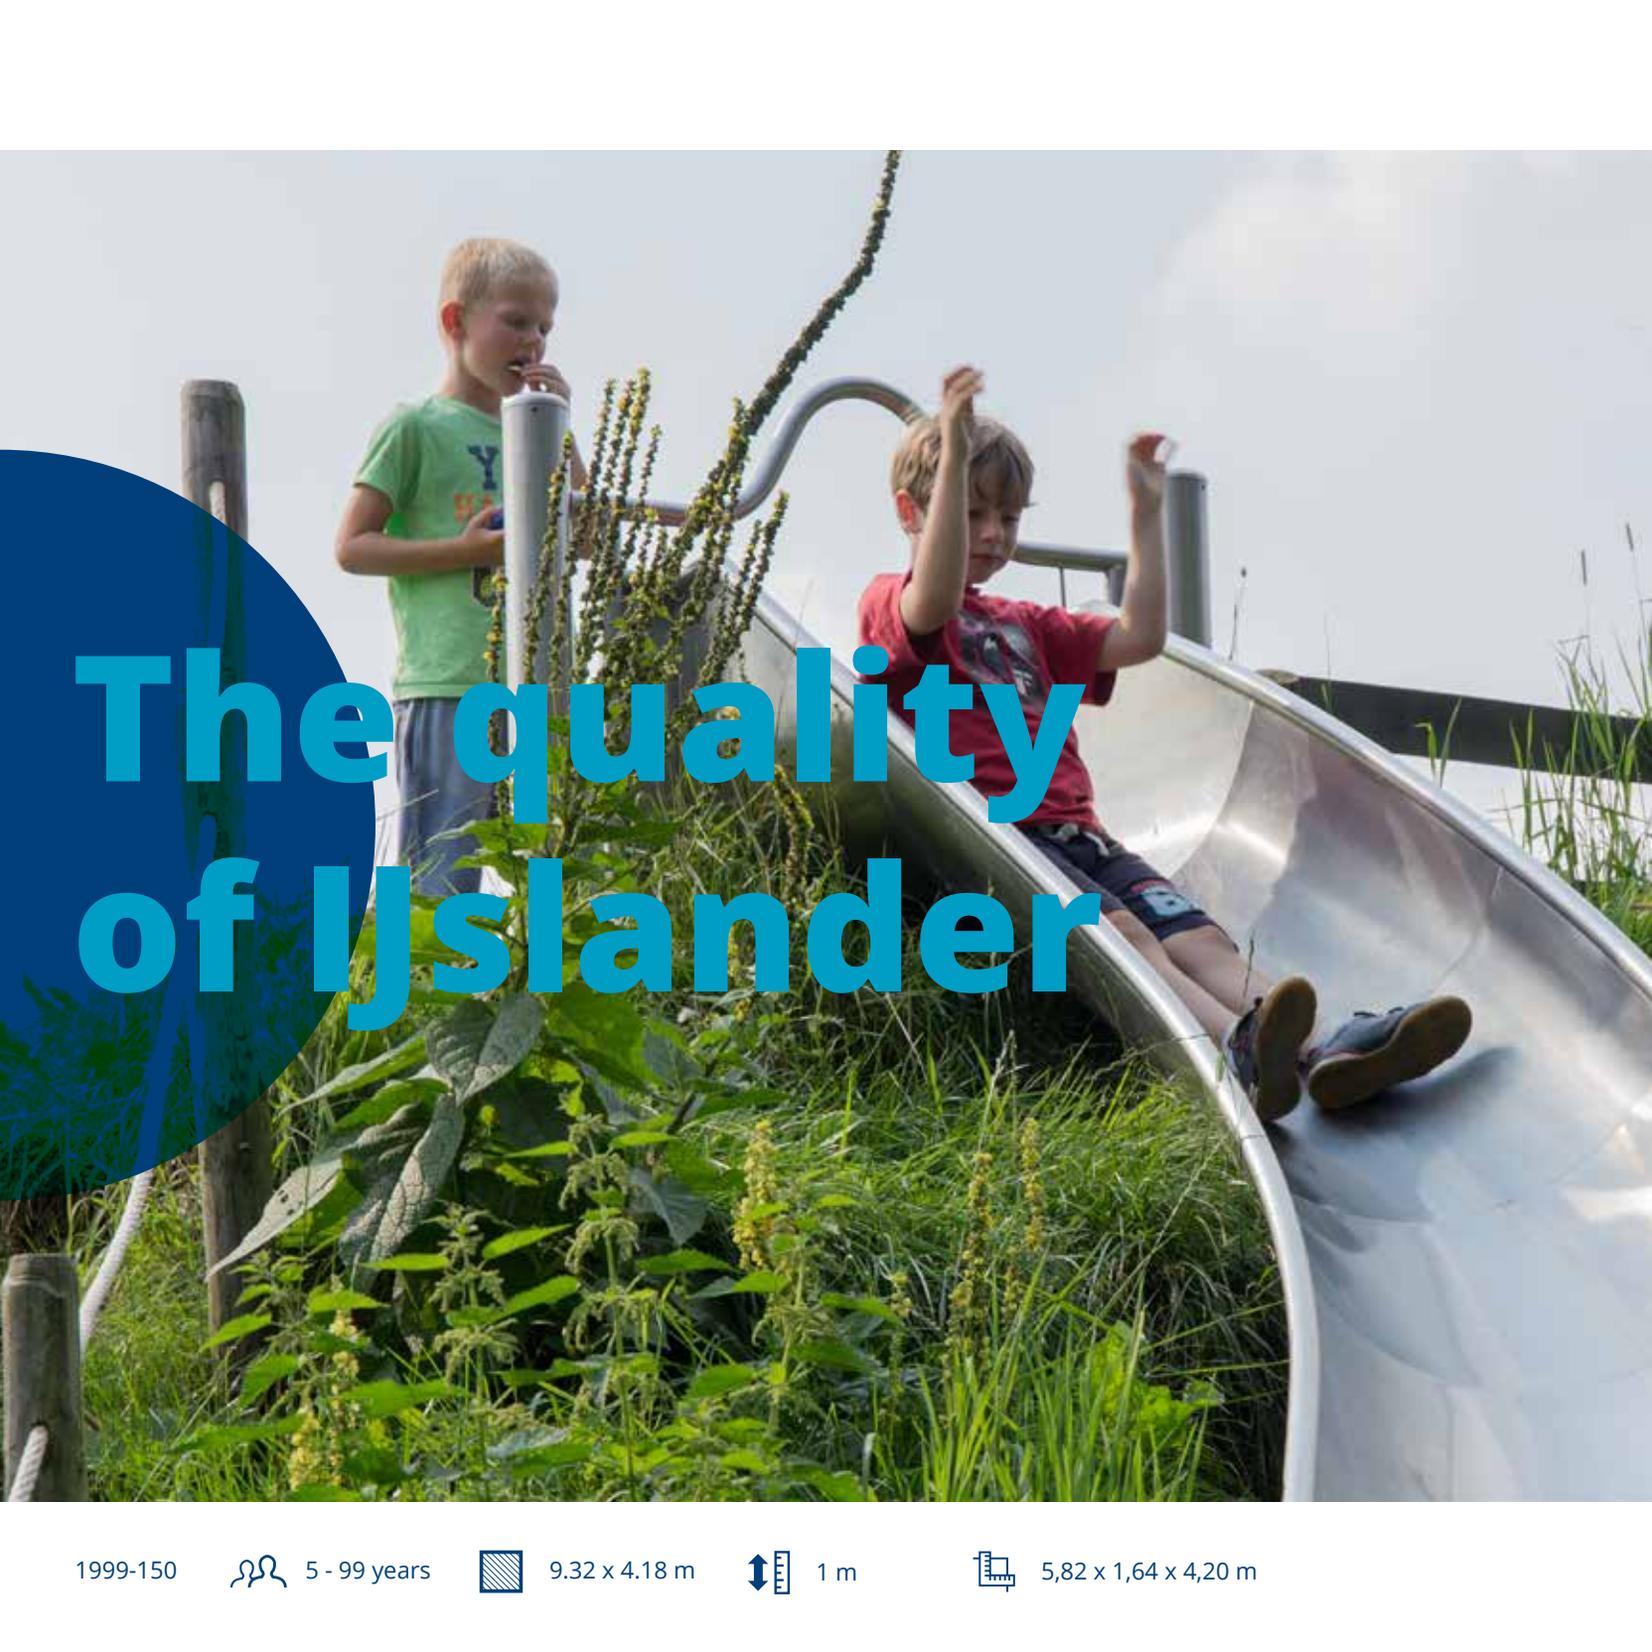

Why is Ijslander equipment cheaper in the long term? Because it uses and reuses durable stainless steel, a material that does not harm the environment, is weatherproof, low-maintenance (stainless steel does not rust, discolour, rot or split) and is unattractive to vandals as it is almost impossible to destroy. The result is a much longer depreciation period than for products made of steel or plastic.

### **Cradle to Cradle**

The claim that our stainless steel equipment is so durable is backed up by the fact that Ijslander reuses it's equipment at the end of its life, according to the Cradle to Cradle principle, which states that waste is food. This means that any materials or resources used must be completely recycled without losing their value. It is therefore essential – because materials cannot be used twice for the same application – that a product is given a second life through 'upcycling'.

### **Circular Award 2019**

Ijslander and two other parties were finalists for the Circular Award 2019. We became second in the final, an achievement that we are very proud of!

# The quality of Ijlander

1999-150

5 - 99 years

1 m

5,82 x 1,64 x 4,20 m

*'Our products are not complete without the exceptional service we provide. This is what we have built our name on over the last 20 years.'*

### **Certification**

All our equipment is TÜV-certified, in accordance with EN1176. Our VCA, BRL9921, ISO9001 and ISO14001 certifications guarantee the high quality of our equipment.

### **Certified inspectors**

Various Ijslander employees are SVS\* and SVS\*\* certified, which means they have been trained by the Safe Play Foundation (Stichting Veilig Spelen).

### **Service & maintenance**

We are based in the Netherlands, which means that our installation and maintenance team can quickly reach you if necessary. All our equipment has a 10-year guarantee on construction parts and a 3-year guarantee on moving parts or parts subject to wear and tear. This does not apply in the case of vandalism, damage to the coating or pollution.

### **Reuse and buy-back**

Ijslander reuses its equipment, either as a complete unit or a part. Components from each piece of equipment can be used in new equipment, or we can rebuild old equipment to produce new or extra play possibilities. We therefore give equipment and components a sustainable second chance. Would you like to return equipment so that others can use it? You can do this using our buy-back arrangement.

### **PlayCare**

It is reassuring to know that your playground or sports area is maintained and inspected by professionals, should anything happen. PlayCare is a service provided by Ijslander for the professional management, maintenance and inspection of playgrounds and sports areas. This both guarantees the safety of the playground or sports area and increases the lifespan of your equipment.

 7.99 x 3.82 m

 2 m

 4.49 x 0.82 x 3.39 m

### **Co-creation**

IJslander is happy to put its expertise to use in partnerships. With our many years of experience, we are no strangers to designing out-of-the-box ideas.

### **User fee**

In a circular economy, the focus is no longer on ownership, but on access. Using sports or play equipment based on a user fee is completely in line with this and is encouraged by IJslander.

### **Delivered ready for use**

We take care of the entire project; we design the playground or sports area, draw up a schedule, act as contact point for potential suppliers, provide feedback to our clients in stages, arrange the installation of the surfaces, equipment and any planting, and deliver the project 'ready for use'.

### **Custom solutions**

We are proud to say that we are particularly specialised in custom solutions. We are able to tailor everything we produce to the wishes of the client. Looking for inspiration? Take a look at page 103.

### **Spaces that grow**

We have developed Click & Play to ensure that playgrounds grow in pace with demographic changes in a neighbourhood. Click & Play has an advanced click-in system and three different building blocks, allowing us to customise play areas. Has the neighbourhood grown out of the play equipment after five years? With Click & Play, we can quickly and easily swap old for new equipment. Take a look at some of the possibilities on pages 28 to 33.

## Low noise Citybox in Amersfoort

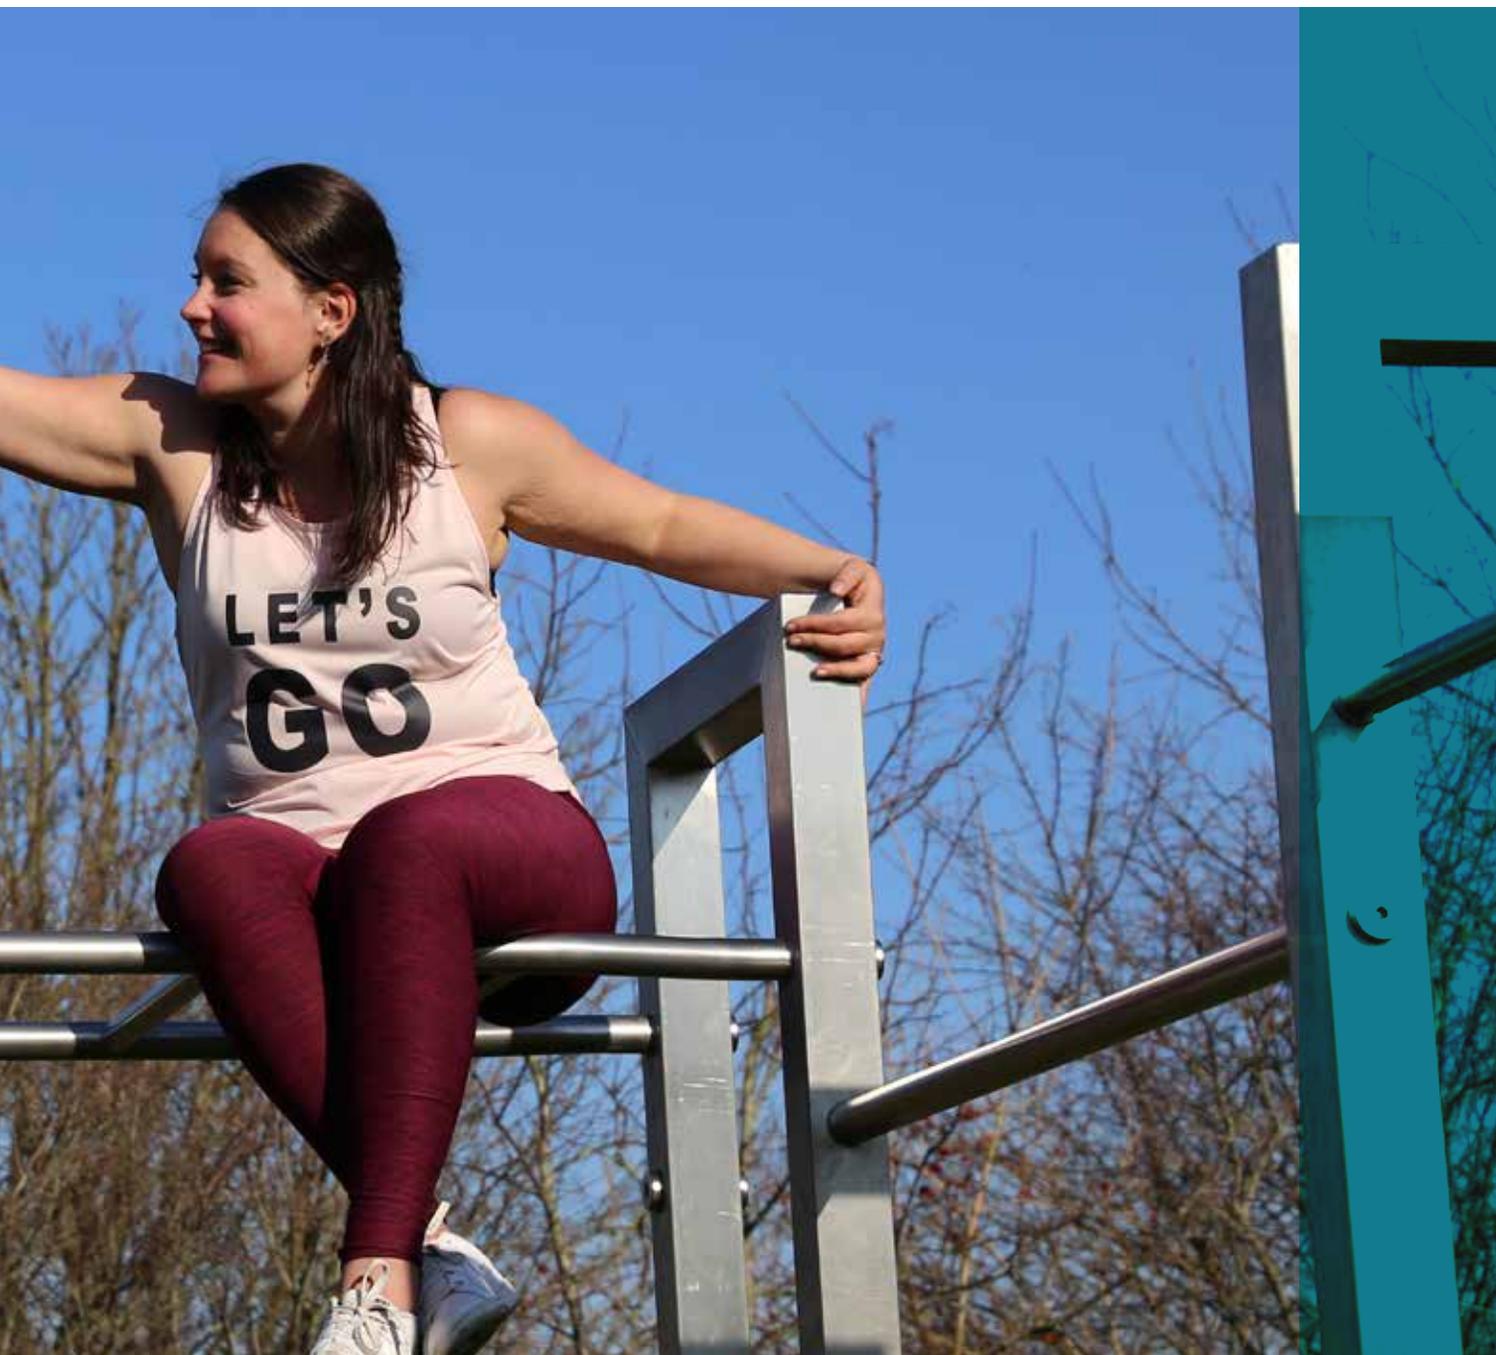

A place where young and old can meet and sport together. This is what we have achieved with our Cityboxes.

This Citybox with football cage has been developed in partnership with the municipality of Amersfoort. A great project, with a focus on neighbourhood participation. We used a low-noise steel construction, so that local residents would not be bothered by the noise. We can supply our football cages in various sizes and as part of various modules.

## Calisthenics & Bootcamp

Do you enjoy outdoor fitness? And do you want to strengthen your body on your own? That is exactly what BarForz fitness equipment for calisthenics and bootcamp fans can do! Independent research shows that the BarForz fitness equipment adds value to the neighbourhood.

An outdoor fitness park with two women exercising. One woman is sitting on a silver metal exercise machine, and the other is standing on a similar machine. A black bag is on the ground near the first woman. The background shows a paved path, greenery, and a building.

## Sport for all

Our own research shows that seniors prefer to exercise in groups and under the guidance of a professional trainer. This way, they know they are doing the right exercises while they also have social contact with other seniors.

With this in mind, Ijslander has developed the Fit4Life equipment in partnership with Top Health Partners and TNO. Ijslander also offers professional support in the form of an introduction training program for professional trainers, to book with the purchase of fitness equipment. After this, people can train either individually or as a group.

## Fun & safe

Natural surroundings encourage children aged 2 to 12 years to experiment. These children want to discover everything themselves, starting with insects on the ground, on twigs or in the grass. These are the first little animals that children can play and discover nature with.

The Bugs series was developed to offer children a safe, orderly place where they can explore nature and set their imaginations free. The Bugs series consists of unique, colourful, small and larger playground equipment in the form of abstract insects. The abstract form stimulates children's imagination and teaches them about insects and nature without them even knowing it.

## Playing in nature

The Hague is a busy city, where children are surrounded by buildings, industrial sites and traffic. This is why the playground in Purmerendstraat was given a largely natural look. However, the biggest challenge lies in the play equipment itself, which had to be low maintenance.

Our solution: vandal-proof and low maintenance stainless steel Madera play equipment with a natural look and installed in green surroundings. Our designer set to work and came up with a wonderful plan. This was so well received by the municipality and local residents that the design was installed almost exactly as the designer originally had in mind!

## Never too young to learn

IJslander designed the Bambino playground equipment series together with TU Twente especially for children aged up to 6 years old. This equipment is smaller than our regular equipment, made with more gentle colours and motion and is transparent and abstract.

It challenges the children to use their imagination and develop their play skills, while also developing their motor skills. Playing on this equipment also stimulates the cognitive and social/emotional development of children up to 6 years old. They therefore develop all kinds of skills while playing on the Bambino equipment; what fun!

## Twisted shapes

Children aged 5 to 12 years can have great fun on our various Carisma playground modules. Instead of traditional straight posts, Carisma uses twisted posts, which encourage children to develop their own games. The posts come in all kinds of shapes, which means these abstract playground modules can be installed anywhere, where they will encourage children to make up their own stories.

Carisma playground equipment is easy to combine, making for fast expansion with playground equipment from the same series. Children can climb, slide, wobble, balance, hang and swing on the different Carisma playground modules.

1708

## On and on

Linekt is developed to encourage children to play and use their imagination. Visually, the equipment – which are abstract shapes – is placed along one long line that connects each module. This stimulates children to think about what they see.

What is connected to what? Where does this coloured line go? Because of its shape, Linekt encourages children to interact with and feel connected to each other. And this reflects our society, because the whole world is made up of connections. Linekt is also exciting: it forms an endless journey and you never know where you will end up...

**Pencil**

## From pencil to sharpener

The Pencil playground equipment has been designed in collaboration with a primary school in order to stimulate children's experience in an educational environment (a school). The colourful equipment for children aged 4 and over consists of large, abstract pencils, erasers and sharpeners which children can climb and slide between.

The Pencil series comes in different, cheerful colours and is familiar to children. This means the Pencil does not necessarily have to be in a school playground, because the fun, oversized shapes also encourage children to play and climb in the neighbourhood or any other place. The extensive net structures allow for plenty of social interaction.

**BYO**

## Memory trainers

BYO playground equipment has been specially designed based on research conducted in 2008 for the International Play Equipment Manufacturers Association by Norquist. This research shows that climbing boosts children's memory, improves their problem solving abilities and is good for mental and social development. These results have been fully incorporated into our BYO playground equipment.

In addition, the modular system of our BYO series is unique. As a result, additional elements can be added to the playground equipment, thereby increasing their play value. Timeless playground equipment!

## Adventurous

The municipality of Hilversum was looking for vandal-proof equipment to refurbish a playground. Equipment that would create plenty of reasons to play for children of all ages.

To meet all the requirements, IJslander developed two new items of play equipment: a mega swing (Next Swing) that the whole family can sit in, and a climb-clamber-jump-turn-crawl-slide combination (Next Riebeeck) for older children. The play equipment was also given a natural look using a light brown coating. These items have now been included in the IJslander range and the Next Swing is a big hit abroad.

## Back to basics

Swing, tumble, climb. Spin, seesaw, crawl. We also supply basic equipment for every type of play, but of course with that extra Ijslander touch.

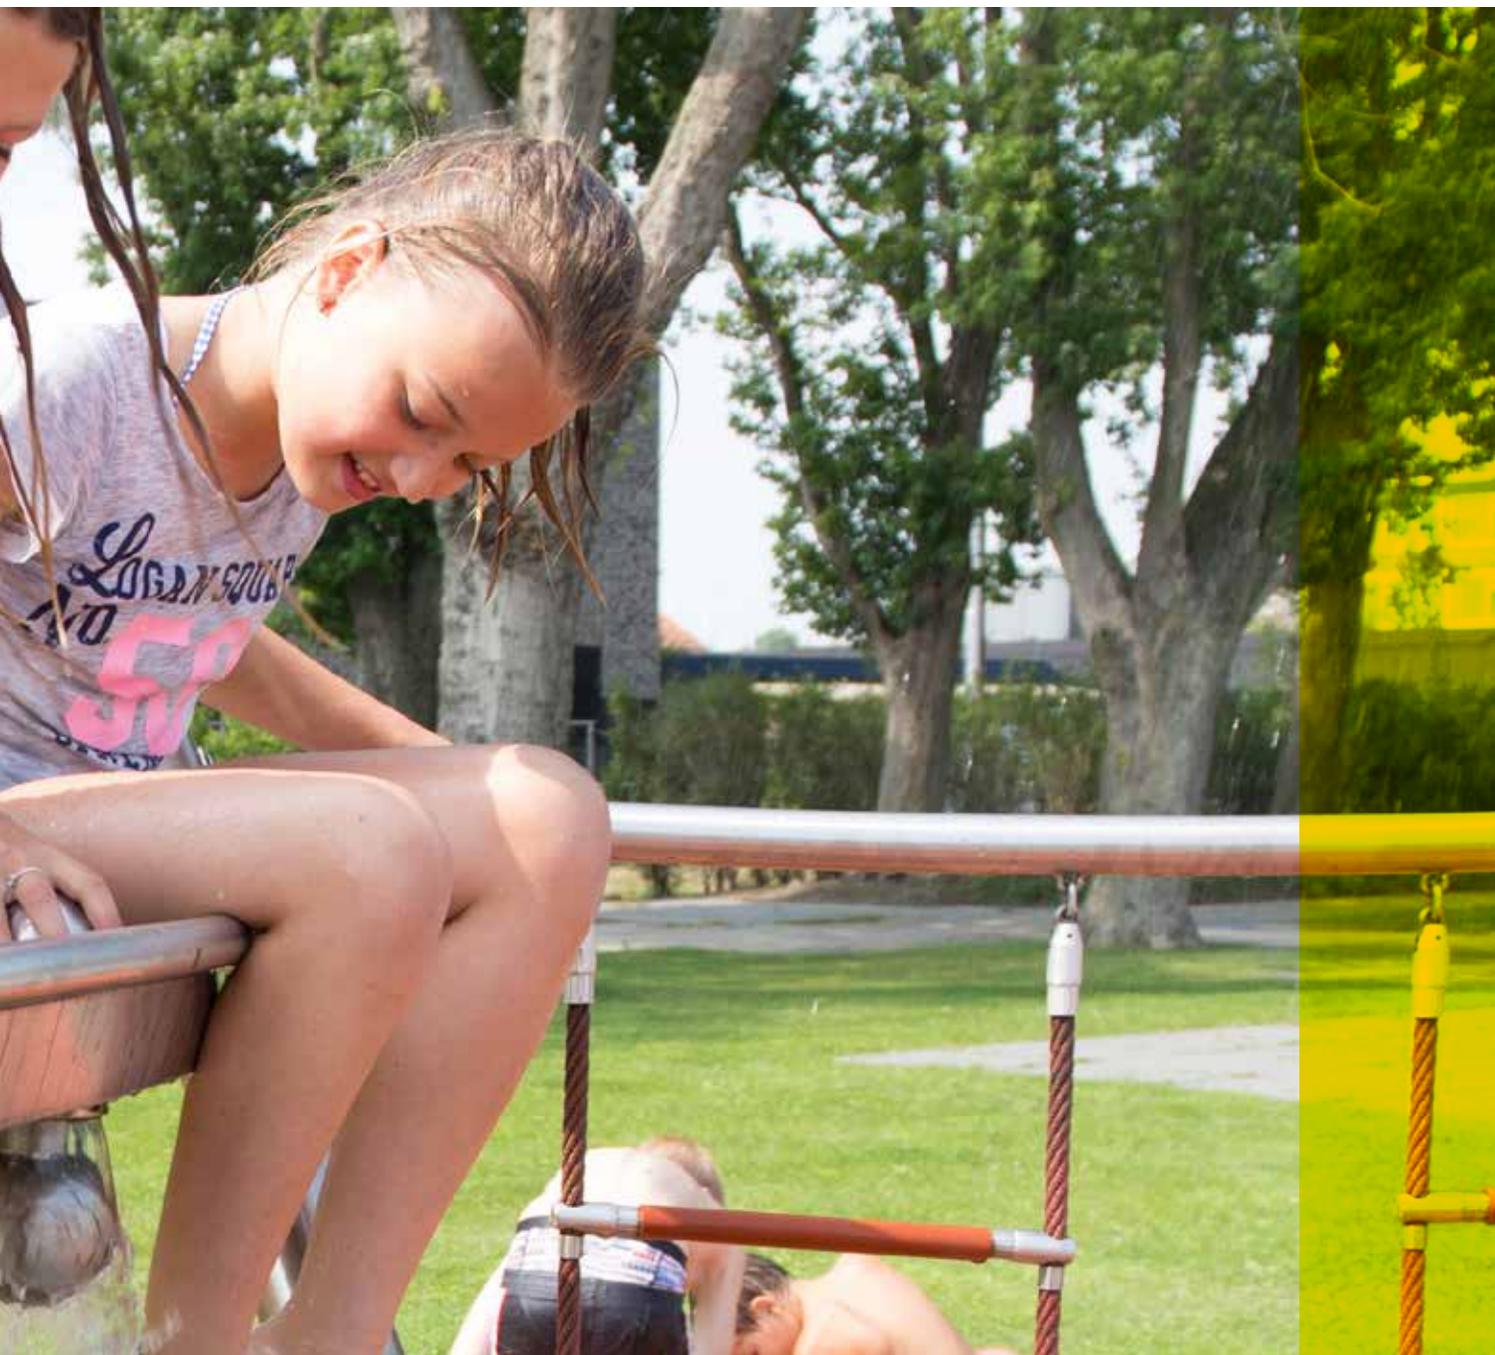

For example, our spinner has an exciting extra twisted pole and we have created a four-metre-high swing. Standing seesaws with an abstract look or a crawl tunnel with a colourful top layer, a curly hanging frame or a JOP. A strong foundation for every age.

The transparent, simple style of the Basic equipment means it can be used in every playground. It can also be used to add play possibilities to any site.

## Spitter, spatter, splash

The Splash is a large interactive water play unit that consists of water, push buttons and light elements controlled by a computer. The computer also controls functions such as automatic shutdown of the water unit in bad weather and flushing out the pipes.

The computer also controls three different games. Children are guaranteed hours of fun with the Splash, because once they hit the buttons on the water unit or press on the adjacent consoles, water comes spraying, splashing or bubbling out of various pipes or special shower heads. The water continuously drains away, making the Splash safe for smaller children.

## Fully customised

A Citybox with rounded corners, a 50-metre long swing or a 'playgola'. Posts with flowers, a shipwreck or a special entrance.

From the launch of the company in 1996, we have made all our sports and playground equipment by hand. Each post, connector, cable, chute, screw, nut, bearing and all other components are individually combined by hand to create a Citybox, Play Hotel or swing.

We have in-house specialists who are passionate about their profession. They can also customise each unit, a fact that we are very proud of.

## Added experience

One of the first pieces of playground equipment that IJslander made was a stainless steel slide. Now, many slides further, we can safely call ourselves playground equipment experts. More and more people contact us for a tunnel slide as an extra attraction, for example in a restaurant or a school playground, or as an escape route instead of an emergency exit, or for a bank slide. At IJslander we say: there is always room for a slide.

A slide really can be built anywhere, inside or outside. There are many different options, but each one ensures an added experience. Do you also want people to remember you thanks to our custom made slides?
